Jaguar
SOFTWARE

Payment Processing

The affordable digital payment processing system.

Digital Payment Processing will automate the data entry of account receivables through the use of a desktop check scanner and software that captures information from payment coupons and checks.

SCAN → **BALANCE** → **POST & DEPOSIT**

Lockbox, Remittance Processing, Remote Capture Lockbox, Retail—Wholesale Jaguar has it all.

Reduce operating cost and improve customer service

How does it work? Checks and payment coupons are stacked by transaction and fed through the scanner for imaging and information capture. The system uses MICR, CAR/LAR, ICR. OCR, and/or Barcode to recognize data. This data is then used to populate the required fields for the accounting system and to create the electronic deposit. MI Payment Processing can detect check boxes, compare fields, verify presence of data in fields, and invoke actions based on information read. If there is information on the payment coupon, MirrorImage Payment Processing interprets the data and takes action based on the custom defined requirements.

The transactions are quickly balanced and a click of the mouse exports the correctly formatted file for your accounting system regardless of the system provider. Then another click of the mouse sends your electronic deposit to your bank.

If your business uses payment coupons, you can benefit. Whether you are a government agency, utility, insurance, credit card or property management company, medical or dental office, service company or any type of business that hand posts, we can demonstrate an affordable, flexible, easy to use solution to significantly reduce the time and costs associated with payment processing.
